PUT OUR EXPERIENCE TO WORK FOR YOU!

SERVICES

Listed here are some of the services we offer

Process Analysis

- Do you need a new system? Can your needs be met with an electronic solution?

- A Broken Process will still be broken if it is replicated with a technical system.

- Before you spend hundreds of thousands of dollars, because that is the true cost of even a $50-70,000 system after you have it customized and consider training and ongoing support, let us help you identify the true root cause of your need.

Database Design

- We have extensive experience creating technical solutions both large and small. Whether your needs require a small MS Access database application or large enterprise level MS SQL, Sybase or Oracle systems --- we can handle your needs.

- Performance in any application can be affected by a poor or a good database design. Performance for transactional processing will drive one design type while performance for reporting needs will drive a much different database design.

Data Dictionary

- Have you ever wondered where that data is? How many different systems does a single data value live in?

- If you have considered these questions, then you should consider building an enterprise level data dictionary.

- A Data Dictionary will allow you to identify redundancies and overlap between systems. It will expose potential hazards of not keeping systems in sync with each other. It will help you answer those questions which you struggle to find answers for.

- Contact us about performing a systems analysis and proposing a Data Dictionary solution for your company.

Custom Software

- Windows based applications
- Web based solutions.
- Web Services
- Mobile connectivity

Customize Enterprise Software

- MS Commerce Server
- MS CRM
- SharePoint
- MS Office
- Intranets
